Today, AutoCAD is the most commonly used CAD program in the world. Despite being a desktop product for many years, AutoCAD has experienced a major surge in popularity in recent years as companies in industries such as construction,

---

engineering and architecture have become increasingly aware of how the program can improve productivity and reduce cost. According to market research published by Adroit Technology in 2009, the industry analyst company estimates that more than 100,000 users

---

of AutoCAD in the U.S. are in the construction industry. In addition, the Cone Search Report published by Navigant Research, a market research and consulting firm, showed that the AutoCAD software market reached a cumulative value of \$1.5 billion in 2008, with many of the most

---

successful companies in the CAD industry being based in North America. The market for AutoCAD remained steady or grew in every sector of the industry in 2010 and 2011, according to Navigant Research. Despite having the most significant user base in the world, AutoCAD is not the only software

---

application in the design and drafting field. There are a number of alternative CAD programs, such as Inventor from Autodesk, which have been used to create some of the most complex and advanced CAD models. In recent years, the development of mobile CAD programs and web-based CAD

---

applications has brought many of these more sophisticated applications within the reach of many more designers. The purpose of this wiki is to provide an online reference for AutoCAD users, with a special focus on third-party add-ons for the program. This wiki contains the following

2D/2E drawing creation  
Creating a 2D or 2E  
drawing 2D/2E drawing  
creation is done by two  
methods: by using an  
XML or DGN (2E) file or  
by using the interface to  
the drawing. 2D/2E  
drawing creation using  
XML Once a user has a

---

drawing in memory, they can use the XML interface to create a new file or template. The XML interface allows users to create a new 2D or 2E drawing file by specifying a template drawing. The template has a set of configuration values for 2D and 2E drawings. Users can drag and drop

---

3D layers from the main drawing canvas to the template drawing canvas. 2D/2E drawing creation using DGN  
Users can also create a 2D or 2E drawing file by dragging and dropping layers from the memory drawing. 3D drawing creation The application supports the creating of 3D drawings or 3D

---

models through its application. AutoCAD draws 3D drawings through the use of geometric primitives, which are created using splines, curves, meshes, straight edges and arcs. Users can apply a 3D primitives to a line or to a 3D face or to a face on an AutoCAD 3D model. When a 3D object is

---

created, the user can assign one or more attributes to the object. To create a 3D drawing, users can create a drawing area, 3D objects, add links to objects and associate views to the objects. 3D drawing creation using commands Users can also create 3D drawings by using the 3D

---

commands. These include the following commands: 3D layer creation Users can create a 3D layer by selecting one or more objects. The objects can be of any type. Users can drag and drop the selected objects on the 3D layer canvas. When a 3D layer is created, the layer can be of any type.

---

3D model creation Users can create a 3D model by specifying 2D and 3D drawings, and by specifying the shape and attributes of the 3D model. Users can specify 2D and 3D drawings on which the model is created. Users can specify the shape of the model. Users can specify the attributes of the

---

model. Features The following are the features of AutoCAD: Layers and ca3bfb1094

#### **What's New In AutoCAD?**

Add a table of contents to your drawings with the Table of Contents tool. Create a table of contents directly in your drawing area with new Table of Contents to AutoCAD commands.  
(video: 1:30 min.)

---

Create, publish, and share to the Web with new Table of Contents to AutoCAD commands.

(video: 1:45 min.)

Convert Xrefs for reference materials. Use Xrefs to automatically include drawings from any web browser, whether inside or outside of AutoCAD, to create comprehensive and

---

linked drawings. Xrefs can be created for your project directly from the current drawing session. Add hyperlinks to each drawing in the linked file. (video: 1:35 min.) Use Xrefs to link to drawings on the Internet. With AutoCAD, now you can use Xrefs to include web-based drawings inside your drawing. (video:

---

1:30 min.) Import Custom Library for referencing, print resources, and electronic documents from the web. See the current drawing and all linked documents in the library by typing the library name in the Command Line. You can use the command line to access your drawing or linked

---

documents with the Xref. You can also quickly open any linked document with a single keystroke. (video: 1:25 min.) Import a linked document with a single command. With AutoCAD, you can import any Xref-linked drawing with just one mouse click. (video: 1:25 min.) With the Table of

---

Contents, Table of Contents to AutoCAD commands, or the Table of Contents with Linked Documents command, add a table of contents to your drawings.

Automatically generate a table of contents from an external source with the new Table of Contents to AutoCAD command.

(video: 1:35 min.) With

---

the new AutoTable command, create a table of contents on your screen with a single mouse click. Specify the table of contents in any format. Automatically add a table of contents to your drawings. (video: 1:35 min.) Printing Enhancements: Get real-time rendering on your screen for complex

---

drawings. With a new real-time rendering, you can see how a drawing looks right away. Instead of waiting a few minutes for final images to appear in a preview window, you can instantly see how your changes look onscreen. (video: 1:40 min.) Quick
